PT New mammalian soluble interferon alpha-receptor forms - used for producting, modulating or modifying the activities of interferon(s) as Example 2; Fig 7; 46pp; English.

CK (W21805) is characterised by a new domain (S) which follows an cend-deleted extracellular domain when compared to transmembranal interferon a compared to transmembranal cend-deleted extracellular domain when compared to transmembranal interferon a compared to transmembranal cend-deleted extracellular domain when compared to transmembranal cend-deleted extracellular domain compared to transmembranal cend-deleted form a cDNA clone (see also T3520) obtd. From human myeloma v266 cells. Soluble, non-membrane bound IFNAR cend-deleted forms 1 and 2 (see also W21806) probably regulate the response of human cells to IFNs, either by acting as IFN antagonists or by regulating the activity of the multiple IFN can be expressed in host cells, and used to inhibit, modulate or modify the activities of IFNs alpha and beta in cells, to tissues and organisms, or for diagnostic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                  11-MAY-1995.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 2; Page 45; 52pp; French.

The transmembrane and cytoplasmic domains of the native IFN receptor have been deleted to obtain a soluble, circulating form of the receptor. Potentially immunogenic epitopes have thus been eliminated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         05-FEB-1990; FR-001298; (EUBL-) LAB EURO BIOTECHNO.

Compsn: of monoclonal antibodies against interferon receptor useful as immuno: modulator, "eg, for treating AIDS

Disclosure; Fig.2A-B; 105pp; English.

A recombinant soluble form of the human interferon class I receptor protein extracellular domain, given in R71723, was expressed in either E coll or COS cell hosts: The protein was used to raise immunomodulatory monoclonal antibodies.

Sequence 436 AB
WPI; 95-200634/27.

New mammalian soluble interferon alpha-receptor forms - used for inhibiting, modulating or modifying the activities of interferon(s) and the activities of interferon(s) and the activities of interferon(s).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                101 AAAAAGTAGAGGTCGACATCATAGATGACCACTTTATCCTGAGGTGGAAC

Novel splice-deleted interferon alpha-receptor (IFNAR) form 2

(W21806) is characterised by a double deletion when compared to transmembranal IFNAR (W21804). The extracellular domain is shortened by 6 amino acid residues and is followed by a truncated intracellular domain. There is no transmembrane region. The amino acid sequence is predicted from a CDNA clone (see also T73521) obtd. Trom human myeloma U266 cells. Soluble, non-membrane bound IFNAR splice-deleted forms I (see also W21805) and 2 may regulate the response of human cells to IFNA either by acting as IFN antagonists or by regulating IFN activities. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNA alpha and beta in cells, tissues and organisms,
                                                    for diagnostic purposes.

New human alpha-interferon receptor protein - useful for testing interferon agonists and in treatment or diagnosis
New human alpha-interferon for the testing interferon agonists and in treatment or diagnosis
Disclosure; fig 4; 30pp; French.
This recombinant human alpha interferon (IFN) receptor protein is useful for the testing of IFN agonists and for treatment and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                   W09105862-A.

New water-soluble polypeptide(s) with affinity for IFN-alpha and beta - used to treat e.g. lugus erythematosus Behcet's disease, aplastic anaemia, diabetes mellitus, rheumatoid arthritis, etc. Disclosure; Page 47; 52pp; French.

The invention covers derivatives of the interferon-alpha and/or beta receptor obtained by deleting the transmembrane and cytoplasmic domains of the native receptor or by substitution. Potentially immunogenic epitopes are eliminated and the deriv. can be secreted from transformed cells. Soluble deriv. s block the activity of IFN alpha/beta and can be used to treat autoimmune diseases or to inhibit graft rejection. See also Q14239.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    documentation_block:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               this protein can be used for blocking the receptor when reques where overexpression of alpha-IFN is harmful. The Abs are also useful for eg drug targetting. Variants of the protein, having residue 164 (Thr.) replaced by Arg and an Asp inserted between residues 479 and 480, are also useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                67. 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  51
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                34

                                                                                                                                                                                                               and beta - useful as immunosuppressants, for treating auto:immune diseases and transplant rejection Claim 3; Fig 2; 58pp; English.

DNA encoding the water-soluble polypeptide with a high affinity for IFN-alpha and beta is isolated by PCR, using appropriate oligonucleotides as primers and cloned cDNA as template. For example
                                                 bacteriophage lambda ZAP, containing the entire coding sequence of the IRN-alpha and beta receptor (230533), was incubated with oligos 030534 and 030535. R28496 represents the complete receptor. R28495 lacks the transmembrane and cytoplasmic domains. Both forms bind IFN in the same way as antibodies so are immunosuppressants e.g. for treating autoimmune diseases and graft rejection. They lack the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-MAR-1993 (first entry)
Sequence of a soulble form of the with a high affinity for IFN-alpha
             toxic side-effects of known Sequence 557 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eid P, Gresser I, Lutfalla G, Meyer F, Mogensen

Human interferon receptor.
Human interferon receptor.
IFN R; extracellular domain; monoclonal antibody; viral infection; cell proliferation; allograft rejection; systemic lupus erythematosus; psoriasis; multiple sclerosis; Behcet's Disease; aplastic anaemia; immunodeficiency; measles virus; interferon-alpha-beta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      documentation_block:

                                                                                                                                           Monocional antibody to human interferon type-I receptor - having neutralising activity against human type I interferon, used for therapy and diagnosis
Disclosure; Fig 3; 21pp; English.
Monocional antibodies produced against soluble forms of the human interferon alpha-beta receptor based on the full-length human IFN-R sequence are claimed. The antibodies are useful for treatment and prophylaxis of disorders involving cell proliferation and/or viral Sequence 557 AA;

Human transmembranal interferon alpha receptor (IFNAR) (W21804).

Includes a 21-amino acid transmembrane region. Novel, splice deleted IFNAR forms 1 (W21805) and 2 (W21806) have been detected that lack this transmembrane domain. These, soluble non-membrane

                                                                                                                                           nuclear receptor-binding auxiliary protein, brx. The brx encoded protein has anti-cancer, anti-proliferative and mitogenic activity and acts as a transcription factor and tumour suppressor. Levels of expression of Brx can be detected using the primers, probes and antibodies (contained in the kit) to determine a predisposition to breast and ovarian cancer and other proliferative disorders of immune tissues. Vectors containing the Brx gene can be used for prevention and treatment of cancers and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Breast cancer gene encoding a nuclear receptor-binding auxiliary protein, brx
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Brx protein; breast cancer; nuclear receptor-binding auxiliary protein

The brx encoded protein has anti-cancer, anti-prolliferative and mitogenic activity and acts as a transcription factor and tumour suppressor. Levels of expression of Brx can be detected using the primers, probes and antibodies (contained in the kit) to determine a predisposition to breast and ovarian cancer and other proliferative disorders of immune tissues. Vectors containing the Brx gene can be used for prevention and treatment of cancers and proliferative diseases of mammalian reproductive and immune tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       W93962;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seq_name:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  alignment_scores
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                encoding the interleukin-10 (IL-10) receptor (ILIOR) and a sequence (S2) cencoding CRFB4, both operably linked to expression control sequences. CC cells containing (I) may be used to identify agonists/antagonist of CC IL-10. Agonists are potentially useful, e.g. for preventing allograft crejection, as vaccine adjuvants, for treatment of photosensitivity, in flammation, autoimmune disease and septic shock, while antagonists are potentially useful for increasing immune responses against tumours, conviruses, bacteria and parasites (especially intracellular pathogens) and conviruses, bacteria and parasites (especially intracellular pathogens) and conviruses, bacteria and parasites (especially intracellular pathogens) and conviruses, by gene therapy, IL-10 sensitivity to a cell that expresses a dysfunctional IL10R and is able to bind IL-10 but not to transduce a cignal. Antisense CRFB4 sequences (especially ribozymes), can inhibit IL-10 activity in cells. Antibodies specific for CRFB4 are used to measure and localise CRBF4, for diagnosis of defective IL-10 activity. CC Fragments of (I) are used as primers or probes to assay CRFB4-specific convertally, especially by intravenous injection or directly into a tumour or allograff.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Percent Similarity:

PT New DNA encoding ETS2 repressor factor - useful for reducing tumour/genicity, esp. oncogene associated tumour cells blaclosure; Page:70-72; 101pp; English.

C Murine ETS2 repressor factor (ERF) (#07702) is a member of the ETS family and acts as a transcriptional repressor in mammalian cells. Its-manno acid sequence was deduced from the murine ERF gene (T47198); Human ERF (see also #07700) has also been identified. C ERF has tumour suppressor activity. Chimeric molecules comprising transcription factors having a binding domain can be used to reduce tumourigenicity associated with inappropriate expression of transcription factors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               <u>B</u>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New water-soluble polypeptide(s) with affinity for IFN-alpha and beta - used to treat e.g. lupus erythematosus; Behoet's disease, aplastic anaemia, diabetes mellitus, rheumatoid arthritis, etc. Disclosure; Page 47; 52pp; French.
The invention covers derivatives of the interferon-alpha and/or beta receptor obtained by deleting the transmembrane and cytoplasmic domains of the native receptor or by substitution. Potentially immunogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      epitopes are eliminated and the deriv. can be secreted from transformed cells. Soluble deriv.s block the activity of IFN alpha/beta and can be used to treat autoimmune diseases or to inhibit graft

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Š
                                                          Disclosure; fig 4; 30pp, French.

This recombinant human alpha interferon (IFN) receptor protein is useful for the testing of IFN agonists and for treatment and diagnosis of viral diseases and tumours. Antibodies raised against this protein can be used for blocking the receptor when required, this protein can be used for blocking the receptor when required, eg where overexpression of alpha-IFN is harmful. The Abs are also useful for eg drug targetting. Variants of the protein, between residues 479 and 480, are also useful.

Claim 3; Fig 2; 58pp; English.
DNA encoding the water-soluble polypeptide with a high affinity for IFN-alpha and -beta is isolated by PCR, using appropriate oligonucleotides as primers and cloned cDNA as template. For example, bacteriophage lambda ZAP, containing the entire coding sequence of the IFN-alpha and -beta receptor (Q30533), was incubated with oligos 030534 and 030535. R28496 represents the complete receptor. R28495 lacks the transmembrane and cytoplasmic domains. Both forms bind IFN in the same way as antibodies so are immunosuppressants e.g. for treating autoimmune diseases and graft rejection. They lack the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence of a soulble form of the interferon (IFN) rece
with a high affinity for IFN-alpha and -beta.
Interferon receptor; alpha-interferon; beta-interferon

The amino acid sequence of human interferon class I receptor is given in R75356. A recombinant soluble form of the extracellular domain of this receptor (R71723) has been used to raise immunomodulatory monoclonal antibodies.
                                                                                                                                                                                                                                                                                                                                                421
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 16-SEP-1994; E03114.

Disclosure; Fig 7; 46pp; English.
Human transmembranal interferon alpha receptor (IFNAR) (W211
includes a 21-amino acid transmembrana region. Novel, spli(
deleted IFNAR forms 1 (W21805) and 2 (W21806) have been det-
that lack this transmembrane domain. These, soluble non-men-
bound polypeptides can be expressed in host cells and used
inhibit, modulate or modify the activities of interferons a
and beta in cells, tissues and organisms, or for diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Abramovich C, Ratovitski E, Revel M;

The amino acid sequence is predicted from a cDNA clone (see also T73520) obtd. from human myeloma U266 cells. Soluble, non-membrane bound IFNAR splice-deleted forms 1 and 2 (see also W21806) probably regulate the response of human cells to IFNS, either by acting as IFN antagonists or by regulating the activity of the multiple IFN subtypes. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNS alpha and beta in cells, tissues and organisms, or for diagnostic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        W21805

Novel splice-deleted interferon alpha-receptor (IFNAR) form 2 (W21806) is characterised by a double deletion when compared to transmembranal IFNAR (W21804). The extracellular domain is shortened by 6 amino acid residues and is followed by a truncated intracellular domain. There is no transmembrane region. The amino acid sequence is predicted from a cDNA clone (see also T73521) obtd. From human myeloma U266 cells. Soluble, non-membrane bound. IFNAR splice-deleted forms 1 (see also W21805) and 2 may regulate the response of human cells to IFNS, either by acting as IFN antagonists or by regulating IFN activities. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNS alpha and beta in cells, tissues and organisms,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

P 2 Compsn: of monoclonal antibodies against interferon receptor resemble of solutions of the silman interferon class i receptor P 1 Useful at John 1 Compsn: of the silman interferon class i receptor P 2 Combinant soluble form of the silman interferon class i receptor CC protein extracellular domain; given in k71723, was expressed in CC either E. Coll or COS cell hosts. The protein was used to raise CC immunomodulatory monoclonal antibodies.

These fragments are between 10-30 residues in length and bind to a human major histocompatibility complex (MHC) class II allotype. These peptides may be used for therapy of autoimmune diseases, such as type I diabetes, rheumatoid arthritis and mutiple solerosis, and to reduce transplant rejection. They may also be used for vaccination providing an exclusively I cell mediated response, which can be class, for class, I beed or both depending on the length and character of the immunogenic peptides.
                                                                                                                                                                                                                                                                                                                                                                                                         12-NOV-1992,

The sequences given in R28823-25 are the mouse alpha 6B, 6A and 3B integrin subunits. Integrins are a family of cell surface receptors which serve cellular adhesion functions. These receptors form a link between the extracellular matrix and the cytoskeleton through their binding to various extracellular components. Each integrin receptor is a heterodimer comprised of an alpha and a beta subunit. Each alpha subunit tends to associate with only one type contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 GNHLYKWKQIPDCENVK 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (HARD) HAR
Chicz RM, I
Vignali, DA;
                                  beta subunit but there are several exceptions to this rule. The 6A and 6B integrin subunits correspond to the laminin receptor and the alpha 3B subunit corresponds to the laminin, collagen and fibronecti receptors. The cytoplasmic domain of the 6A and 6B integrins different process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alpha 3B integrin subunit cDNA.

PS Claim 1; Page 9; 51pp; English.

CC A novel pharmaceutical composition has been developed which comprises a CC carrier and an anglogenesis inhibiting amount of a peptide which is: CC (a) an inhibitor of basic fibroblast growth factor (bgg)-stimulated CC bovine endothelial cell proliferation having an ICO of at least CC 10 mu M; (b) greater than 75 amino acids in length; and (c) greater CC than 80% homologous with a subunit selected from human fast-twitch troponin subunit T. The present sequence CC represents human fast-twitch troponin subunit T. The compositions can be used for inhibiting atopic anglogenesis. They can be used to treat a cancerous condition, or to prevent progression from a pre-neoplastic or can malignant state into a neoplastic or a malignant state. They can CC neovascularisation such as neovascular glaucoma, diabétic retinopathy, cretinoblastoma, retrolental fibroplasia, uveitis, retinopathy of CC prematurity, macular degeneration, corneal graft neovascularisation as cossociated with choroldal or iris neovascularisation. They can also be consed to treat other disorders e.g. haemangioma, arthritis, psoriasis, corganulations, haemophilic plaques, delayed wound healing.

CC granulations, haemophilic joints, hypertrophic scars, nonunion

5. clavuligerus ORF10 product.
Clavulinic acid; clavulinate;
Streptomyces clavuligerus.
CA2108113-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel interferon gamma receptor beta chain polypeptide treatment of inflammatory bowel disease and liver damage claim 6; Fig.5A; 86pp; English.

The IFN-gamma receptor beta-subunit encoded by a cDNA clo from a human cDNA library is given in R75783. Recombinan pref. with the transmembrane anchoring domain deleted or inactivated and with the cytoplasmic domain deleted, may may be used to treat pathological conditions associated w IFN-gamma production:
                                                                                                                                                                                                                                                                          R77867 standard; Protein; R77867;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        r 16

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             interferon-gamma-antagonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence is that of human interferon-gamma accessory factor-1. Incorporation of AF-1 into immune and tumour cells re-establishes normal function with elimination of malignant cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Suppressing tumours in mammals with accessory for interferon gamma, specifically induction of

proplypeptide binding compounds
the present sequence is a H. pylori cytoplasmic protein.
The protein may be used in a vaccine to prevent or treat H. pylori
infection or to identify H. pylori polypeptide binding compounds,
useful as potential H. pylori life cycle activators or inhibitors.
The genomic sequence of H. pylori (ATCC 55679) was determined from
coverlapping contigs generated by mechanically shearing the bacterial
coverlapping contigs generated by mechanically shearing the bacterial
coverlapping contigs generated by mechanically shearing the bacterial
coverlapping contigs generated by mechanically shearing the bacterial
coverlapping contigs generated by mechanically shearing the bacterial
coverlapping contigs generated by computer evaluation. To
identify likely H. pylori antigens for vaccine development, the amino
acid sequences predicted from various ORF were analysed for significant
bomology to other known or exported membrane proteins. Having identified
and determined the sequences of interest, particular regions can be
isolated from H. pylori by PCR amplification for recombinant polypeptide

A 15 kb fragment: S. Clavullgerus:NRRL.5741 genomic DNA (Q91580), it extending downstream from pcbC, included 10 ORFs encoding the enzymes required for clavulinate blosynthesis. The ORF10 product (R77867) showed high similarity to cytochrome P450-type enzymes from other Streptomyces spp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Berglindh

Claim 1; Pages 55-59; 72pp; English.

CC This represents the Zcytor7 cytokine receptor. Zcytor7 is a ligand-

CC binding receptor polypeptide and is a novel member of the type 2 cytokine

CC receptor family (CRF2). An expression vector containing the Zcytor

CC polynucleotide, operably linked to transcription promoter, as sequence

CC encoding a transmembrane and intracellular domain, or both, and a

CC transcriptional terminator can be used to transform host cells for the

CC recombinant production of the polypeptide. The sequences can be used to

CC study the Zcytor7 gene and to isolate ligands binding to it. Zcytor7 is

CC preferentially expressed in the kidney, pancreas, prostate or nervous

CC tissue. Agonists of Zcytor7 can be used to stimulate proliferation and

CC also be used in the treatment of renal, neural, pancreatic and prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA sequences encoding galactoprotein b3 - produced using DNA constructs also antibodies to Gap b3 used to detect tumours that result in elevated expression of protein.

PS Disclosure; Fig 6; 46pp; English.

The sequence was deduced from 3 overlapping clones isolated from can be used to express the gap b3 protein which is a transformation-dependent cell surface glycoprotein. The C-terminal 32 AA segment is likely to constitute the cytoplasmic domain with the longer 959 AA residue segment forming a glycosylated extracellular domain. The N-terminal region metal binding sequences. Each repeat consists of a long (21-28 AA) stretch followed by a short (5 AAs) stretch followed by a short (5 AAs) stretch. The alignment of pattern, especially the presence of XXXAP (X-a hydrophobic AA) at the end of most of the longer stretches (except for the 2nd and 7th the longer stretches (except for the 2nd and 7th the longer stretches (except for the 2nd and 7th the longer stretches (except for the 2nd and 7th the consist of the 2nd and 7th the 2nd and 7th the 2nd and 7th the 2nd and 7th the 2nd and 7th the 2nd and 7th the 2nd and 7th the 2nd and 7th the 2nd and 7th the 2nd and 7th the 2nd and 7th the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 1 the 2nd and 7th 2 the 2nd and 2nd 2nd 2nd 2nd 2nd 2nd 2nd
                                                                                                                                                                                                                                          Query Match 1.6%;

Human alpha3 integrin protein.
Anti-integrin alpha3 antibody; h
                                                                                                                                                                                                                                                                                                                                                      the end of most of the longer stretches (except for the 2nd and 7th repeats. The protein may be used to produce antibodies and these, or the DNA sequences, can be used to detect and quantify levels of Gap b3 protein or mRNA in biological samples. A high level of the protein is indicative of certain cancers.
